HYYP TCP/IP module

HYYP APP now supports the ability to view live video and access pre-recorded video events when the alarm gets triggered. By simply linking zones to video channels in the App, when alarm activations get sent through to users mobile phones, users can touch on the event to access video on the DVR/NVR, 10 seconds prior to the event taking place for verification.

FEATURES

- o TCP / IP
- o DHCP ethernet required
- o Remote panel programming supported

Mobile App Control

- o Arm, disarm and bypass your system remotely
- o Receive push notifications on your phone
- o Automation features (gate/garage/lights)
- o GSM or IP module options
- o Video verification when used with NEU TECH CCTV DVR/NVRs, see what triggered your alarm and view live video
